

Exclusively from National Tree Company

MEMORY-SHAPE[®]

BRANCH CONSTRUCTION

With *Memory Wire* Technology
Branches spring into position ■ Minimal shaping required

Memory-Shape[®] products feature tree branches constructed with *Memory Wire* – branches that are pre-shaped at the factory and will spring into position when the tree is assembled for display.

With a Memory-Shape tree, there is none of the bending and shaping of individual tree branches required during assembly of typical artificial trees.

Memory-Shape products are available in lit or unlit versions.

A typical tree will need to be shaped after assembly

Memory-Shape trees are ready to decorate right out of the box
