

Introducing

# POWERCONNECT™

## Another new and exclusive innovation from National Tree Company

National Tree Company has now reduced the time and effort necessary to assemble its pre-lit artificial trees with the application of **PowerConnect** technology.

Trees that feature **PowerConnect** will no longer require the multiple light string and extension cord connections between tree sections. With **PowerConnect** electrical connections are made through the tree center poles.

These pole-to-pole connections remove an assembly step, reducing set-up time – a bonus that consumers will embrace. **PowerConnect** is available on any tree variety or size that is pre-lit with low voltage LED light sets.

Please contact your National Tree Company representative for more information.
